SAFETY PRECAUTIONS

- This fuel pump is not designed for use in any non-automotive applications.
- Make sure there are no sources of spark or open flame.
 - Perform work in a no-smoking area, or post no-smoking signs in the area selected.
 - Keep a dry chemical fire extinguisher (class B) near the work area.

BEFORE INSTALLATION

- Perform this repair only in a properly equipped service facility.
- Allow the vehicle to cool before performing any operation which could possibly expose gasoline or gasoline vapor to hot parts such as catalytic converters, hot light bulbs or similar components.
- Position the vehicle in a clear, level, well ventilated work area.
- Disconnect the ground cable from the vehicle's battery before performing any operation involving gasoline, gasoline tanks or gasoline lines.
- Avoid using extension cords or lights which might overheat or cause sparks.
- To reduce the risk of fire and personal injury, it is necessary to relieve the fuel system pressure before serving fuel system components.
- Avoid inhaling gasoline fumes and prolonged skin contact with gasoline. Promptly wash any body areas which have been in contact with gasoline.

GENERAL PRECAUTIONS

- Never run a fuel pump dry or with any liquid other than petrol.
- Contamination is a major cause of fuel pump failure. Remove all contaminants from the fuel tank prior to installing the new pump. And use an in-tank filter (or strainer) to restrict large contaminants from getting into pump's working mechanism.
- During installation make sure no dirt or other contaminants are introduced into the fuel system. Fuel pump failure due to dirt or contamination is not covered under warranty.
